

## Omniquad AntiSpy Enterprise Edition

Illegitimate programs that secretly monitor employee workstation activities (commonly referred to as Spyware) pose serious information security issues to every organization. The presence of Spyware on your network is highly undesirable and in most cases harmful as it not just disrupts your end users' web usage but also puts your confidentiality at risk.

Nasty pop-ups, tracking and transmitting your company's web use to advertisers from within your network, malicious browser plug-ins that divert users' web searches to unsolicited "special offers", home page hijacking, keystroke capture, slow Internet access and workstation performance degradation - these are all common manifestations of Spyware.

### **Protect your network: eliminate Spyware with Omniquad AntiSpy Enterprise.**

Omniquad AntiSpy is a powerful, out of the box enterprise solution that detects and eliminates spyware from your network. It is designed for effortless remote deployment/administration and provides safe and effective protection against all types of Spyware (including Ad-ware, Mal-ware, spy tools and key loggers). The network administrator can instantly get a complete overview of Spyware affected workstations and take immediate action.

#### **Centralized Management**

Omniquad AntiSpy Enterprise is integrated within the Omniquad Enterprise Manager framework; and leverages the software's ability to stringently enforce corporate security policies and manage networks of any size. Spyware detection and removal can be easily administered through a centralized management console, from anywhere on your network.

#### **Automated Client Deployment**

The network administrator can login to the admin console and automatically deploy the client component across the network. This will then enable you to schedule scans, define scan actions and distribute the policy set to all required workstations. All AntiSpy scan policies you set are applied immediately without the need to reboot or any end user intervention.

#### **Real-time Scan**

Activate real-time spyware protection on all your workstations. The AntiSpy real-time scan is a constant memory scan that will pre-emptively block spyware programs and terminate spyware programs if they are started or about to run on your workstations. View the real-time scan statistics from the AntiSpy Enterprise management console installed anywhere.

#### **Customized Policy Enforcement**

Workstation/user and group specific scan policies can be configured to suit the different work timings and Internet usage of your network users.

- Schedule Quick/Smart or Full scans
- Run scan-on-demand to execute immediate scans on any remote workstation whenever you need it.
- White-list to exclude user-defined Spyware from the detection database

### **Advanced Protection**

Protect your network from potential spyware threats using the Advanced Protection features.

- Home Page Hijack Protection
- Pop Up Blocker

### **Automatic Definition Updates**

The AntiSpy Spyware detection database is constantly updated to provide effective protection against new spyware threats. Download of latest signatures to the server and their distribution to client workstations is fully automatic.

### **Comprehensive Scan Reports**

AntiSpy scan reports detailing Spyware detected and cleaned are stored on the server. The reports can be reviewed through the admin console reporting interface and can be accessed from anywhere.

### **Other benefits**

- Real-time Scan
- Integrated Cookie Killer
- Spyware Whitelist
- Quick/Smart/Full Scan options
- User Login Scan
- On-Demand and Scheduled Scan
- AntiSpy Monitor/Scan Progress Viewer
- Real-time Scan Statistics Viewer
- Constantly updated spyware signatures
- Report suspect Spyware hotlink
- Comprehensive spyware information
- 24/7 Technical Support
