OMNIQUAD

## DATASHEET

Mailwall Remote blocks all kind of malicious e-mails like Spam mails, virus infected e-mails, phishing attacks while at the same time also providing options to enforce e-mail policies and keep the entire e-mail management system under control. With multiple operation centres around the globe, monumental infrastructure, 24/7/365 phone and chat support and 99.99% uptime, Mailwall Remote stands tall on reliability.

With its rich user friendly interface, management reporting system and evolved, reliable engine, it is one of the most mature, tested and stable mail scanning solutions available in the market today.

### Power-packed features, for a safer network and improved productivity

Features	Benefits
<b>Multiple AV Engines</b> Mailwall Remote scans emails using several leading anti-virus engines at the same time.	Fail-safe up to the minute protection to ensure that even new virus attacks over email is never a problem.
<b>99% Spam Protection</b> Dedicated team constantly analyses spam traffic, updates spam signatures and fine tunes the filters.	With multiple filters and proprietary filtering techniques, the false positives are kept down and the spam out.
<b>ECRS - E-mail Contingency and Recovery Service</b> Optional backup of emails to a recovery server upto past 7 days.	Get on with work "almost as normal" even if your mail server goes down while you have time to restore your mail system by logging on to the Recovery Server website.
<b>Image Trap</b> Identifies, intercepts and classifies image and movie attachments in email allowing through or stopping them based on their content.	Ensures control over bandwidth and added protection against new methods of spamming.
<b>Attachment and File Size Control</b> Controls attachments and file sizes, users are allowed to send and receive. Mails can be quarantined, rejected or delivery set to off-peak hours as desired.	Conserve bandwidth, decrease distractions, improve efficiency and increase productivity.
<b>Usability</b> Mailwall Remote offers a user-friendly Windows Vista look and feel.	True flexibility and the ability to create complex rules and policies normally only found in software packages.
<b>Reliability</b> Mailwall Remote systems are located in high-security buildings with access control, power backup and fire suppression systems.	Guarantees 99.99% service availability, by mirroring our secure mail relays in key locations with prime backbone sites kept with multiple Internet Service Providers.
<b>Reduced cost of ownership</b> Less IT infrastructure to manage - No new hardware or software to buy or license.	A managed security solution saves your organization money, time and effort.
<b>Spam Digest Report</b> User specific daily spam digests listing the days quarantined emails.	Reduces overall administration time and gives users tools to manage their mail.
<b>Detailed Reporting</b> Detailed spam reports on all the various aspects covered by the service.	Ensures accountability of the solution and demonstrates effectiveness.
<b>Comprehensive Service Level</b> Agreement Run by three Global Operations centres, 24 x 7 Support and three separate teams of technicians.	Ensures reliability.
